Experiences

Data Science Intern

Jun 2025 - Aug 2025

Corizo

Remote

- **Model Development:** Designed supervised machine learning classification models that improved forecasting accuracy by 10% using algorithms such as logistic regression and random forest.
- **Data Preprocessing:** Processed and engineered features from 7,000+ customer records, ensuring high data quality and consistency for model training.
- **Performance Metrics:** Achieved 89% prediction accuracy on held-out data through systematic experimentation, hyperparameter tuning, and validation.
- **Data Visualization:** Created insight-driven visualizations in Matplotlib and Seaborn to highlight key drivers and present actionable recommendations to stakeholders.

Education

Bachelor of Technology in Computer Science, CGPA: 8.12/10

Aug 2021 - May 2025

Vellore Institute of Technology

Vellore

Relevant coursework: Data Structures and Algorithms, Database Management Systems, Probability and Statistics, Linear Algebra, Operating Systems, Computer Networks.

Skills

Programming Languages : Python, Java, C++

Data Science Libraries : Numpy, Pandas, Matplotlib, NLTK, Scikit-Learn, seaborn

Data Tools : Natural Language Processing (NLP), MySQL

Development Tools/Platforms : Git/GitHub, Linux, AWS Cloud, VS Code, Jupyter Notebook

Projects

Heart Stroke Prediction

Project Scope: Built an end-to-end heart stroke prediction pipeline on ~5,000 patient records using Python, Pandas, and NumPy.

Modeling: Implemented Logistic Regression, SVM, Decision Tree, and KNN classifiers, achieving ~94% test accuracy.

Analysis & Visualization: Conducted EDA on key risk factors and visualized patterns with Matplotlib and Seaborn.

Loan Approval Prediction

Project Scope: Built an end-to-end loan approval prediction pipeline on ~4,000+ applications using Python, Pandas, and NumPy.

Modeling: Implemented Decision Tree and Random Forest classifiers, achieving around 91-98% accuracy on held-out data.

Analysis & Visualization: Conducted EDA on key features (CIBIL score, dependents, assets, loan amount, tenure) and visualized patterns using Matplotlib and Seaborn.

Car Price Prediction

Project Scope: Built a used car price prediction pipeline on ~10,000 listings from Indian metro cities using multi-feature tabular data.

Modeling: Implemented Decision Tree and Random Forest regressors, selecting Random Forest as the best model based on MAE, MSE, and R².

Analysis & Insights: Performed EDA to identify key price drivers such as car age (in years), body style, manufacturer, kilometers driven, region, ownership type, and quality score.

Certifications

AWS Cloud Practioner

Amazon Web Services - Oct 2023

Extra Curricular

Bulls and Bears Club

VIT Vellore

- Ran 12+ finance-focused events with industry creators, including stock trading simulations for 500+ participants with 85%+ satisfaction.
- Delivered 15+ financial literacy workshops to 500+ students, driving 70%+ average improvement in knowledge scores.
